Phylo episode notes 5/26

- are we sourcing phylo data from a file or a website?

- do we have newick / nexus data
    - ↳ I think this is actually fine; it's good to go over the formats and we are creating / typing newick-shaped data.

- <u>cleaning</u> phylo data section is currently complicated by and possibly redundant with RoTL lesson

- what if:

    - newick

    - visualize

    - store tree? (IDK why I lean that way)

    - phylo hill intuition building

    - access a tree from RoTL and calculate hills on it for sim data
